

The solution.

It's worth talking about.

SCENSIBLES®

Scented bags for clean, easy, discreet disposal of feminine care products: pads, tampons, and panty liners.

- Single-use biodegradable plastic bags with a pleasant fresh scent
- Contemporary pink on pink, flower pattern
- Easy tie handle closure
- Accommodates varying sizes of feminine care products
- High density poly, 1ml thick material 3 3/8" x 9 3/4" x 2" gusset

The benefits.

More than just talk.

- **Eases concerns** of contact with germs and exposure to possible blood-borne pathogens
- **Conceals contents**
- **Provides discreet disposal** in or out of the stall
- **Keeps stall waste receptacle cleaner**—shorten time emptying and disinfecting
- **Inhibits the growth of odor-causing bacteria** with built-in antimicrobial agents
- **Masks odors**
- Provides an **easy alternative to flushing**
- **Reduces costly maintenance** and repairs of plumbing systems
- **Reduces toilet paper consumption**—no need to wrap product in wads of toilet paper
- **Biodegradable plastic**

The comments.

Who's talking about the Scensibles® System.

"We were experiencing expensive plumbing blockages from feminine care items at a number of our properties. The installation of the Scensibles® system took care of the problem. The way I look at it, every tampon not flushed is a success story! I believe that supplying our tenants with these hygiene products reflects our concern for not only their health but the health of their patients."

— Bruce H. Hunt, Director Commercial Property Management, THE CABOT GROUP, Inc.

"The Scensible Source solution is a cost efficient, and safe, green alternative to traditional disposal methods. Not only does this healthy approach reduce the labor of custodians, but customers appreciate the ease and eco-design of the system. Although no one likes to discuss disposal of feminine products, Scensibles is the best replacement system — everyone benefits: customers, custodians, and the environment!"

— Perry Shimanoff, Cleaning Consultant

"Plumbing problems, sanitary and cleaning issues, and cleaner rest rooms—it's amazing to find a product that solves all three. The day we had Scensibles installed, I immediately began getting e-mails from women in the building, thanking us for this great solution. As a property manager, I see feminine hygiene products as a problem with plumbing and clogs. Since we installed Scensibles, we have not had a single maintenance issue related to feminine hygiene products. This has saved us a great deal of money!"

— D. Mark Campbell, Director of Administrative Services/Property Manager for Association United States Army

"I discovered your product (SCENSIBLES) in the ladies' room at Wegmans. I was initially attracted by the subtle and pleasant scent (which is very unusual in a public restroom) so I looked around the stall. The pretty pink bags caught my eye and my curiosity so I pulled one out. I thought WOW! I must say, that was the most pleasant experience I've ever had in a public restroom."

— Milinda Perez, Consumer

"I like the fact that women can use these bags, dump hygiene items in there, and then toss them in the regular trash. It's much better than cleaning staff having to stick their hands in the containers and pull used products out. Not everyone wraps up their [waste], so blood-borne pathogens are a problem. Also, [some passengers] would drop needles in the sanitary napkin receptacles, even though we provide a needle container."

— Ellen White, Kingston Dock The Washington State Ferry System

"The sanitary disposal bags (SecureFit360) are working great inside of the restrooms here at the airport. The employees love the durability and scent of the bags. The handle on the bag is great for removing them out of the bins. An important factor is the sanitary disposal bags appearance look much better inside the bins. I actually received hugs from the employees for introducing these bags to them. Thanks for creating a bag that we could use to make our employees happy and provide a better appearance inside of the restrooms."

— Melody Smith, Hartsfield-Jackson Atlanta Airport

"We are pleased with the improvement in cleanliness and convenience the Scensibles bags offers our tenants. We have found the product to be a cost-effective alternative to the traditional waxed bags. Our janitorial staff is thrilled with the ease of disposal."

— Robert C. Tait, President of Broadstone Real Estate LLC.

When was the last time **you** visited the women's restroom?

What you'll find might shock you.

The disposal of feminine care products

is the **problem** no one wants to talk about.

That's why we developed the **Scensibles® System.**

Germs

Odors

Eyesore

Costs

Pollution

The problem.

It's bigger than you think ... now let's talk about it.

Germs

- Stall waste receptacles are the most contaminated spot in ladies' restrooms.
- Dangers of exposure to blood-borne pathogens are often overlooked.
- Germs, bacteria, and illnesses from person to person are often spread via contact with unclean restroom fixtures.

Odors

- Stall waste receptacles are usually emptied once or twice per day—harboring nasty odors.
- Odor ranks as one of the most common complaints from restroom visitors and is associated with an unclean, unhealthy environment.

Eyesore

- Unwrapped, discarded feminine care products in stall waste receptacles are repulsive to view.
- Floors littered with soiled feminine care products ruin the aesthetics of even the finest restrooms.
- Stall waste receptacles are often streaked with blood and visibly dirty.

Costs

- Tampons and pads clog toilets and cause pipe blockages, which lead to unscheduled maintenance calls, time-consuming cleanups, and expensive plumbing repairs.
- Tampons and pads do not disintegrate, decompose, or disperse in the short amount of time spent in the sewer system. Damages to pumps and motors as well as removal at the water treatment plant; adds to the cost of operation and tax bills.
- Septic, recreational vehicles, and marine sanitation systems are severely damaged from the flushing of feminine care products.

Pollution

- Overflows from combined storm and sanitary sewer systems go into rivers, lakes and oceans.
- The Center for Marine Conservation reported in 2001, over 170,000 tampon applicators were collected along U.S. coastal areas in a one year period.

The facts.

Speak for themselves.

- Feminine hygiene disposal receptacles have the highest isolation of **E. coli** in female restrooms and the risk of exposure to **blood-borne pathogens** is often overlooked.
- The U.S. Center for Disease Control and Prevention says touching a germ-laden object is the **No. 1 source of spreading disease.**
- **Only sixty-seven percent** of restroom patrons actually wash their hands after using the restroom.
- **OSHA guidelines** require practices that protect employees from direct physical contact with discarded feminine care products.
- **Ninety percent of plumbing problems**—and costly maintenance and repairs—are caused by the flushing of feminine care products down toilets.
- Restrooms may account for only 5% of the total building space but **fifty percent of service complaint.**

The founder.

Talks to you.

Disposing of feminine care items. It's not a subject that was likely to come up with my girlfriends on the phone or over a cup of coffee. That is until now. *Now* I can't stop talking about it. "The problem" began to really bother me a few years ago. I started to notice signs in public restrooms: "Do not flush tampons and other feminine care items because they cause clogs." What was the alternative? Discarding products in a visibly dirty bin, overflowing with smelly, unsightly items? This was unacceptable to me. Why should women have to put up with these hideous conditions? And it's a legitimate health concern.

I knew there must be a better way. We put considerable time and effort in coming up with the design and features of Scensibles®, a unique product that addresses "the problem" head on. It's the kind of product that people say "that makes so much sense!" We believe you will too! Put Scensibles® in your women's facilities and you will do more than create attractive, user friendly restrooms. You'll also contribute to a more hygienic public environment and save on expensive plumbing repairs as well!

Sincerely

Ann Germanow

The system.

Straight talk.

- **Single-bag dispensing**
- **Simple installation with double-sided adhesive or screws**
- **Quick, convenient refilling**
- **Easy-to-clean**

Refills

Box contains 50 interleaved bags

- Removable rigid plastic liner
- Combo liner bag (LBCD) 9 1/2" x 3 1/2" x 12"

(CDSS)

- 11" x 8" x 4"

Brown waxed paper bags.

A real problem to talk about.

Stall waste receptacles are the most contaminated spot in women's restrooms.

Commonly used brown waxed paper bags do not hold their form to properly cover the inside surface and do not conceal soiled content.

OSHA's Blood Borne Pathogen Standard expects that feminine care products be discarded into waste receptacles that are properly lined to prevent contact with the contents.

Average public toilet seat--1000 microbial load

Average exterior surface of stall waste receptacle--2,644 microbial load*

Average interior surface of stall waste receptacle--27,955 microbial load*
* Test conducted for Scensibles Source by Ethox International, Inc., STS Life Sciences Division

Stall receptacles are a breeding ground for odor-causing bacterial growth.

Stall receptacles can not serve as both a dispenser of brown waxed paper disposal bags and a container to hold discarded products.

Needles and other sharps are frequently found inside stall receptacles.

Specially designed liner bags.

Let's discuss the solution.

- **Covers** the inside surface completely to protect from soiling
- **Encloses discarded products;** reducing risk of exposure to possible blood borne pathogens
- **Masks odors**
- Servicing made **safe and easy**
- **Exceeds OSHA expectations** of protecting janitorial staff
- **Provides cost effective alternative** to brown waxed paper bags
- **Inhibits the growth of odor-causing bacteria** with built-in antimicrobial agents
- **Biodegradable plastic,** Fragrance, Low density poly, 1 ml thick

SecureFit 360® Liner (LBSF360)

- Fits plastic, metal and stainless steel surface mounted receptacles
- Size: 13" x 14" with unique 6" strap to secure in place and safe removal

Multi Liner (LBM)

- Fits removable plastic or metal receptacles in recessed and floor models
- Fits Rubbermaid 6140 with removable plastic rigid liner
Size: 10" x 4" x 12"
